On 31 May 1954, two aircraft were observed from a distance of about 10 km. taking off toward the west at a short interval in the area west of the north-western perimeter of Poznan. The aircraft had two engines each, short noses and double rudder assemblies. The weather was fair and there was no wind. After a very short time, the aircraft disappeared out of sight.

Comment. Two fighter regiments of the Polish Air Force had been assumed to be stationed at Poznan-Lawica airfield inasmuch as take offs and landings of jet fighters had repeatedly been reported from that area. The airfield itself cannot be reconnoitered. The present information indicates that the field is occupied by bomber units. The aircraft observed were probably Pe-2s. Therefore, the fighter aircraft previously observed in that area are probably stationed at Poznan-Krzesiny airfield.
